Abstract

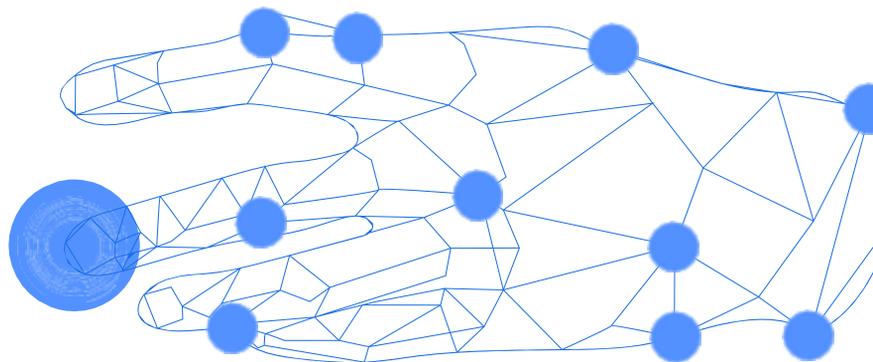

The finance side of any enterprise is the least discussed side of any business. No one wants to open up about how they manage their finance. It is true personally as well as professionally. Finance management involves some tedious tasks that not many of us understand. But thanks to cloud-based tools, handling finances has become easier for businesses. To take the finance management one step forward, we can integrate different apps generally used in the process. This whitepaper deals with 7 finance integration that could benefit your organization.

Finance App Interactions is the Future

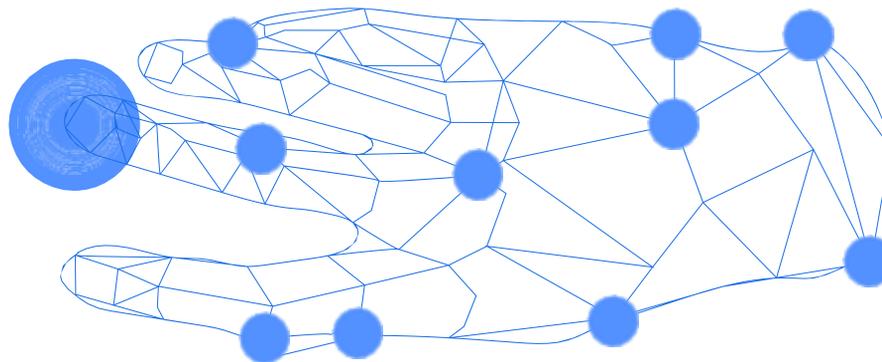

As an enterprise grows, its financial transactions see a rise and the maintenance gets tedious. There are several applications involved and each application has its own importance. With a growing number of applications, the process is getting complex.

With intelligent integration and automation, you can make your job easier. You can integrate different finance systems to make everything work seamlessly. Also, integrate finance apps with other communication applications to create an automatic workflow.

The Limitations of Current Finance Applications

The inability to combine with different applications and lack of flexibility. Solution is to improve the efficiency of a finance management system and its interaction with other applications used in the organizations.

What Can We Do to Eliminate the Efficiencies?

The solution lies in integrating different cloud based applications to create a workflow specific to your organization. Here is how you can automate your finance workflow:

1 . Accounting Applications:

Each organization using on-premise accounting software for security, it becomes difficult to communicate the information with different departments and customers. You can integrate your accounting software with communication apps like slack and Microsoft teams to communicate the data seamlessly within departments.

2. Expense Tracking

When your employees are on the go, it gets difficult for HR department to keep track of expenses. Monitoring those expenses is a part of your accounting software. But it gets complex when you're each increasing expense. You can automate this workflow by integrating finance applications with HR and communication platforms. Directly download your expense reports through HR applications like Google sheets. This way you can manage your expenses with just one application.

3. Budgeting Tool

Each organization has its own budgeting needs which keep growing each year. There is a budget drawn for marketing, sales, HR and other such departments. You can integrate this software with your expense applications and easily manage your budget and expenses. You can even download the reports through Microsoft excel and communicate the information automatically through slack. Integrating all these apps will surely give you an efficiency workflow.

4. Payroll Management

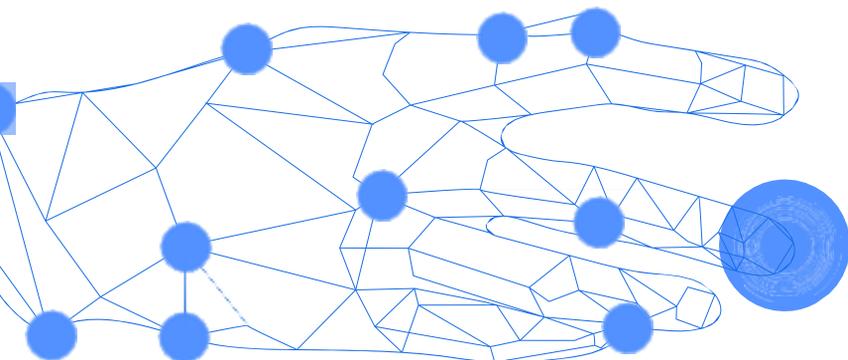

This is an area where you cannot afford to have clerical errors. Your HR department uses tons of applications to manage finance, which can lead to inefficiency and manual errors. You can automate payroll management by integrating it with leave management, talent management software's. This way you'll know which employees can be a future talent and payment is done without any errors. If you are working with freelancers, you can make sure the system works both the ways.

5. Inventory Tracking

If you have multiple locations, tracking and managing inventory becomes difficult. With automation, you can integrate all the software's and keep track with single interface. You can combine budget, planning, and billing tools with this inventory tracking app and create a system which works efficiently at locations.

6 . Tax Preparation

With so many tax related tasks an enterprise have to manage, it becomes tiresome to manage different applications. Combine this with other HR and finance apps, and the system itself starts working against it. But if you sync all these software's, you can create a workflow which automatically calculates and manages your budgets and taxes. Tasks like importing, downloading and communicating the data through different applications can be done easily.

How Finance Automation Can Help Organizations

Finance Automation can help the organizations in the following way:

- 65% reduction in PO Processing time
- 90% lower invoicing errors rates
- 60% touch less invoices processing
- Manage inventories through a single location
- Automate your Finance management tasks
- Save time, money and resources by automating the collaboration of time

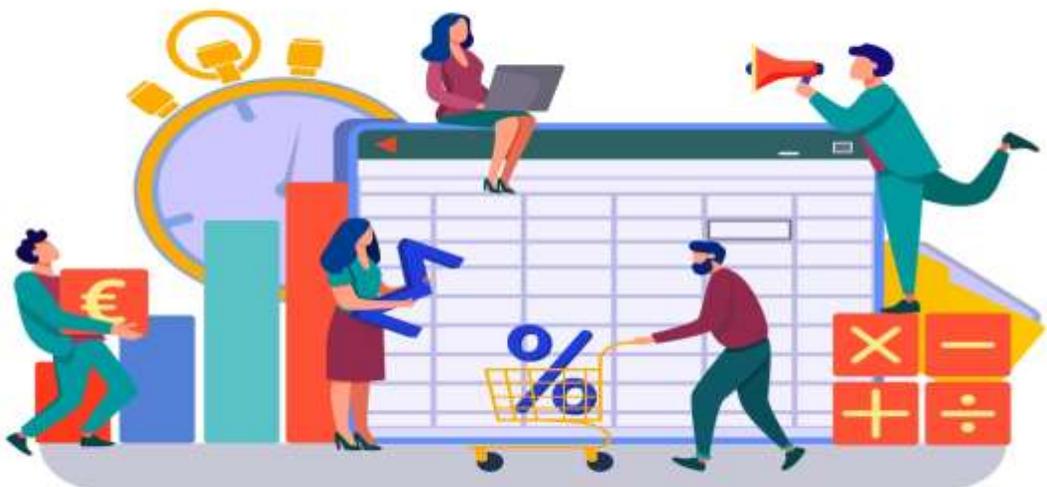

Summary

To summarize, finance automation can take care of the most important tasks of your organization at minimum errors. Efficiency is always at the core of any enterprise and with application automation, you surely are taking one step forward.

It gives you power to manage everything effectively through one single location. Choosing a high quality financial tool is not enough.

Your HR has to juggle with different systems to carry out a task. This will make the process efficiency. With integration you customize the workflow to work according to your needs.
